

TESTIMONIAL
PETER AND BRENDA BINKS
CROYDON HILLS, VICTORIA

Being aware of the water shortage crisis we are now experiencing we do all we can to conserve and reuse as much water as possible. Yarra Valley Water were running a water saving initiative competition that we entered and were lucky enough to win. Our prize was an EcoVerta Mixa from Advanced Eco Technologies in Mornington, Victoria. The EcoVerta Mixa saves the wasted water that goes down the drain while you are waiting for the hot water to arrive. The EcoVerta Mixa was installed and connected to our shower and now we no longer have to catch the wasted water in a bucket, EcoVerta Mixa does all that for me automatically. I have had the water redirected to my water tank, which is reused for our toilet.

We just love our EcoVerta Mixa as it works quietly in the background with no intervention from us and does not require any external power or pumps. We just turn the tap on and wait for the hot water to arrive. We also love the fact that it is 100% Designed, Owned and Made in Australia.

We think this product is amazing and are now telling all our friends about it. We would recommend an EcoVerta to anyone.
